

ERROR SHEET ON RDA

1. When I am trying to install mariadb it shows error.

```
Amazon Linux 2023
https://aws.amazon.com/linux/amazon-linux-2023

Last login: Wed Dec 10 11:48:30 2025 from 18.206.107.29
[ec2-user@ip-12-0-9-219 ~]$ sudo yum install mariadb-server -y
# Amazon Linux
sudo systemctl start mariadb
sudo systemctl enable mariadb
Last metadata expiration check: 1 day, 11:50:02 ago on Wed Dec 10 08:00:45 2025.
No match for argument: mariadb-server
Error: Unable to find a match: mariadb-server
Failed to start mariadb.service: Unit mariadb.service not found.
Failed to enable unit: Unit file mariadb.service does not exist.
[ec2-user@ip-12-0-9-219 ~]$
```

Resolution:

You're getting this error because **Amazon Linux 2023 does NOT support mariadb-server using yum.**

Amazon Linux 2023 uses **dnf** and MariaDB packages are renamed.

I have installed package 'sudo dnf install mariadb105-server -y'

2. I got an error while installing MYSQL

The same issue as it is not supporting in amazon 2023

I have taken amazon linux 2 and installed sql in it then sql installed successfully

Resolution

I have selected database then modified then disable multi-az and then went to backup section, where I found retention, in that I have taken retention as 1 day then saved, then it has shown me create reply option when I selected database and clicked on action and replica option was enable.
