

Error sheet

- I was facing error while launching or trying access my domain.
- So I resolved the issue by enabling http in cloudfront > distributer > distribution list > origin > edit > enable http

504 Gateway Timeout ERROR

The request could not be satisfied.

We can't connect to the server for this app or website at this time. There might be too much traffic or a configuration error. Try again later, or contact the app or website owner. If you provide content to customers through CloudFront, you can find steps to troubleshoot and help prevent this error by reviewing the CloudFront documentation.

The screenshot shows the AWS Route 53 console for the hosted zone **arjmohi.site**. The **Records (6)** tab is active, displaying a table of DNS records. The **NS** record is highlighted, showing the name servers for the zone. The **TTL** is 172800 seconds. The **Routing policy** is set to **Simple routing**.

Record name	Type	Routing policy	Difference	Alias	Value/Route traffic to	TTL
arjmohi.site	A	Simple	-	Yes	d3twk4yflg.cloudfront.net.	-
arjmohi.site	NS	Simple	-	No	rs-1930.awsdns-49.co.uk. rs-1083.awsdns-07.org. rs-484.awsdns-60.com. rs-916.awsdns-50.net.	172800
arjmohi.site	SOA	Simple	-	No	rs-1930.awsdns-49.co.uk. s...	900
aw046268145369111dca3df2a7668.arjmohi.site	CNAME	Simple	-	No	_ed95nec5c7123e438b53c4...	300
www.arjmohi.site	A	Simple	-	Yes	d3twk4yflg.cloudfront.net.	-
_f91137ef8bd7402af3bda8af37ac26f1.www.arjmohi.site	CNAME	Simple	-	No	_72a5cb2c39625a461c9ac92...	300

As you can see I did not select HTTP option so that's the reason I got the error. I found it in cloud front > distribution > origin

The screenshot shows the **Edit origin** settings for the origin **arjmohi.site.s3-website-us-east-2.amazonaws.com**. The **Protocol** is set to **HTTP only**. The **HTTPS port** is 443. The **Minimum Origin SSL protocol** is **TLSv1.2**. The **Origin path** is optional. The **Name** is **http://arjmohi.site.s3-website-us-east-2.amazonaws.com-mirc6icfn51**.

Settings

Origin domain
Choose an AWS origin, or enter your origin's domain name. [Learn more](#)

Enter a valid DNS domain name, such as an S3 bucket, HTTP server, or VPC origin ID.

Protocol | **Info**

☒ HTTP only
☐ HTTPS only
☐ Match viewer

HTTPS port
Enter your origin's HTTPS port. The default is port 443.

Minimum Origin SSL protocol
The minimum SSL protocol that CloudFront uses with the origin.

☒ TLSv1.2
☐ TLSv1.1
☐ TLSv1
☐ SSLv3

Origin path - optional
Enter a URL path to append to the origin domain name for origin requests.

Name
Enter a name for this origin.

Add custom header - optional
CloudFront includes this header in all requests that it sends to your origin.

☐ **Origin Shield** Available with the Premium plan. [Upgrade](#)
Maximize performance and reduce origin costs by consolidating duplicate requests and routing them through the fastest path to your origin.

servers) to serve your hosted zone. Route 53 then creates a name server (NS) record inside the zone, with the same name as your hosted zone, that lists the four allocated name servers.

If you change this NS record, it doesn't change the name servers that Route 53 allocated. There are use cases when you might change the NS record, such as configuring branded name servers. However, be aware that making incorrect changes to the NS record can cause your domain to become unavailable on the internet. [Learn more ↗](#)

Record name

arjmohi.site

Record type

NS – Name servers for a hosted zone

☐ Alias
